

IN THE CLAIMS:

Please amend Claims 25, 29, 36 and 40 to read as follows. Note that all claims currently pending in this application, including those not presently being amended, have been reproduced below for the Examiner's convenience.

1-24. (Withdrawn)

25. (Currently Amended) An image transmission apparatus comprising:
transfer means for transferring the information of data amount indicating the data amount of image data to an external apparatus and the information of priority order of said image data;

reception means for receiving from said external apparatus a response signal indicating whether or not said external apparatus admits of the transmission of said image data in accordance with said information of data amount, said information of priority order and the free storage capacity of storage means to store said image data in said external apparatus; and

control means for controlling the transmission of said image data in accordance with the response signal received by said reception means to indicate whether or not the transmission of said image data is admitted.

26. (Previously Presented) An image transmission apparatus according to Claim 25, wherein the response signal to indicate whether or not the transmission of said image data is admitted is generated by the manual operation of said external apparatus.

27. (Original) An image transmission apparatus according to Claim 25, wherein said image transmission apparatus is a digital camera.

28. (Original) An image transmission apparatus according to Claim 25, wherein said transfer means and said reception means perform transfer and transmission by use of cordless line.

29. (Currently Amended) An image transmission apparatus according to Claim 25, wherein said transfer means performs transfer by adding the thumb nail images having a file name corresponding to said image data or said image data or the information of [[or]] priority order of said image data.

30. (Previously Presented) An image transmission apparatus according to claim 25, wherein the image corresponding to said image data is the image corresponding to a plurality of files, and said response signal to indicate whether or not the transfer of said image data is admitted permits the transfer of a part of a plural files, but not any transfer of the files other than the part of the file permitted for transfer.

31. (Original) An image transmission apparatus according to Claim 29, wherein said file name indicates the positional information when said image data is photographed.

32. (Original) An image transmission apparatus according to Claim 25, wherein the image corresponding to said image data is the image corresponding to a plurality of files, and said transfer means transfers the audio corresponding to said image.

33. (Original) An image transmission apparatus according to Claim 27, further comprising:

photographing means to photograph images, and said photographing means is capable of photographing during the transmission of said image data.

34. (Original) An image transmission apparatus according to Claim 25, further comprising:

means for designating the suspension of said communication.

35. (Original) An image transmission apparatus according to Claim 25, wherein the image corresponding to said image data is the image corresponding to a plurality of files, and said reception means receives from said external apparatus the information indicating the files to be received by said external apparatus, and the information indicating the address of the external apparatus other than said external apparatus, and the files to be received by the external apparatus other than said external apparatus.

36. (Currently Amended) An image reception apparatus comprising:
reception means to receive a transfer including the information of data amount indication to the data amount of image data and the information of priority order of said image data, from an external apparatus;

detection means to detect the free storage capacity of storage means to store said image data;

output means to output the indication screen to indicate the reception of said image data in accordance with said information of data amount, said information of priority order and said free storage capacity;

transmission means to transmit to the external apparatus the signal to indicate whether or not said image data are required in accordance with the reception indication of said image data; and

image reception means to transmit to said external apparatus the signal to indicate whether or not said external apparatus is admitted to the transmission of said image data, to receive the image data transmitted by said external apparatus in response to said signal transmitted by said image reception means.

37. (Original) An image reception apparatus according to Claim 36, wherein the signal to indicate whether or not the transfer of said image data is admitted is generated by the manual designation in accordance with the indication of said output means.

38. (Original) An image reception apparatus according to Claim 36, wherein said image transmission apparatus is a digital camera.

39. (Previously Presented) An image reception apparatus according to Claim 36, wherein said transmission means and said reception means perform transfer and transmission by use of cordless line.

40. (Currently Amended) An image reception apparatus according to Claim 36, wherein said reception means receives the thumb nail images having a file name corresponding to said image data or said image data ~~or also receives the information of priority order of said image data.~~

41. (Original) An image reception apparatus according to Claim 36, wherein the image corresponding to said image data is the image corresponding to a plurality of files, and said signal to indicate whether or not the transfer of said image data is admitted permits the transfer of a part of plural files, but not any transfer of the files other than the part of the file permitted for transfer.

42. (Previously Presented) An image reception apparatus according to Claim 36, wherein a file name indicates the positional information when said image data is photographed.

43. (Original) An image reception apparatus according to Claim 36, wherein the image corresponding to said image data is the image corresponding to a plurality of files, and said reception means receives the audio corresponding to said image.

44. (Original) An image reception apparatus according to Claim 36, further comprising:
photographing means to photograph images, and said photographing means is capable of photographing during the reception of said image data.

45. (Original) An image reception apparatus according to Claim 36, further comprising:
means for designating the suspension of said image reception.

46. (Original) An image reception apparatus according to Claim 36, wherein the image corresponding to said image data is the image corresponding to a plurality of files, and the information indicating the files to be received by said image

reception means, and the address of the external apparatus to receive the files other than the files to be received by said image reception means are transmitted when transmission is made.

47. (Previously Presented) An image transmission apparatus according to Claim 25, wherein the response signal includes information which designates a terminal station other than said external apparatus as a transmission destination of the image data to be transmitted.

48. (Previously Presented) An image reception apparatus according to Claim 36, wherein the signal which indicates whether or not said external apparatus is admitted to the transmission of the image data, includes information which designates a terminal station the other than said image reception apparatus as a transmission destination of the image data to be transmitted.
